EASY ACCESS TO PIPE MAINTENANCE

NEW

BLÜCHER® ACCESS PIPE WITH HOOK

EASY ACCESS TO PIPE MAINTENANCE

The primary purpose is to inspect, solve problems encountered during operation, and reduce the costs for maintenance.

How it works

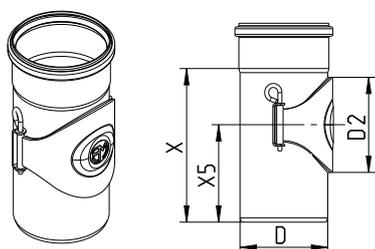

The BLÜCHER® Access Pipe with hook is installed behind the vacuum toilet. The hook is strategically placed in the toilet flush to catch unintended objects that might potentially clog large sections of the vacuum sanitary system.

The hook does not reduce the discharge of sewage and toilet paper.

Highlights

- Effortlessly and swiftly remove trapped objects
- Reduce the costs for maintenance and downtime during operation
- Fast and easy inspection
- Recommended to be installed horizontally, but can also be installed vertically if necessary
- Smooth inner surface - to avoid flow turbulence - for optimal vacuum performance
- Resists up to 3 bar pressure and -0,85 bar vacuum
- Fast installation

AS SIMPLE AS THAT ...
