These instructions apply to:

BLÜCHER® Art Deco shower channels for concrete and tiled floors with liquid membrane and for installation against a wall.

Accessories and spare parts:

Water trap: 513

Product details are available in the product database at www.blucher.com

For the owner/user:

A BLÜCHER® Art Deco shower channel in AISI 304 has been installed.

Before first use:

- Check that the channel has been cleaned leaving no concrete spills etc.
- Check that a water trap has been installed.

Normal operation:

If there are a lot of impurities in the water, it may be necessary to clean the water trap at appropriate intervals.

Cleaning:

- Clean the channel, water trap and grating as necessary.

Cleaning of drains with colour-coated surface:

The coloured BLÜCHER drainage products have been PVD coated to add elegant colours to the stainless steel surface.

Cleaning requirements for these coloured products are in principle the same as for the naturally coloured stainless steel products – discolouring can, however, occur if detergents containing bleach (chloride or hydrogen peroxide) or strong acid/caustic detergents are used.

The products are best cleaned by washing with mild soapy water on a soft cloth. Never use steel wool or sponge scouring pads.
